AI-assisted design + writing / No client results

Keep IDs as text.

An identifier is a label, not a calculation.

CUSTOMER_ID

00124

5 characters in. 5 characters out.

00124 ⟶ ~~124~~

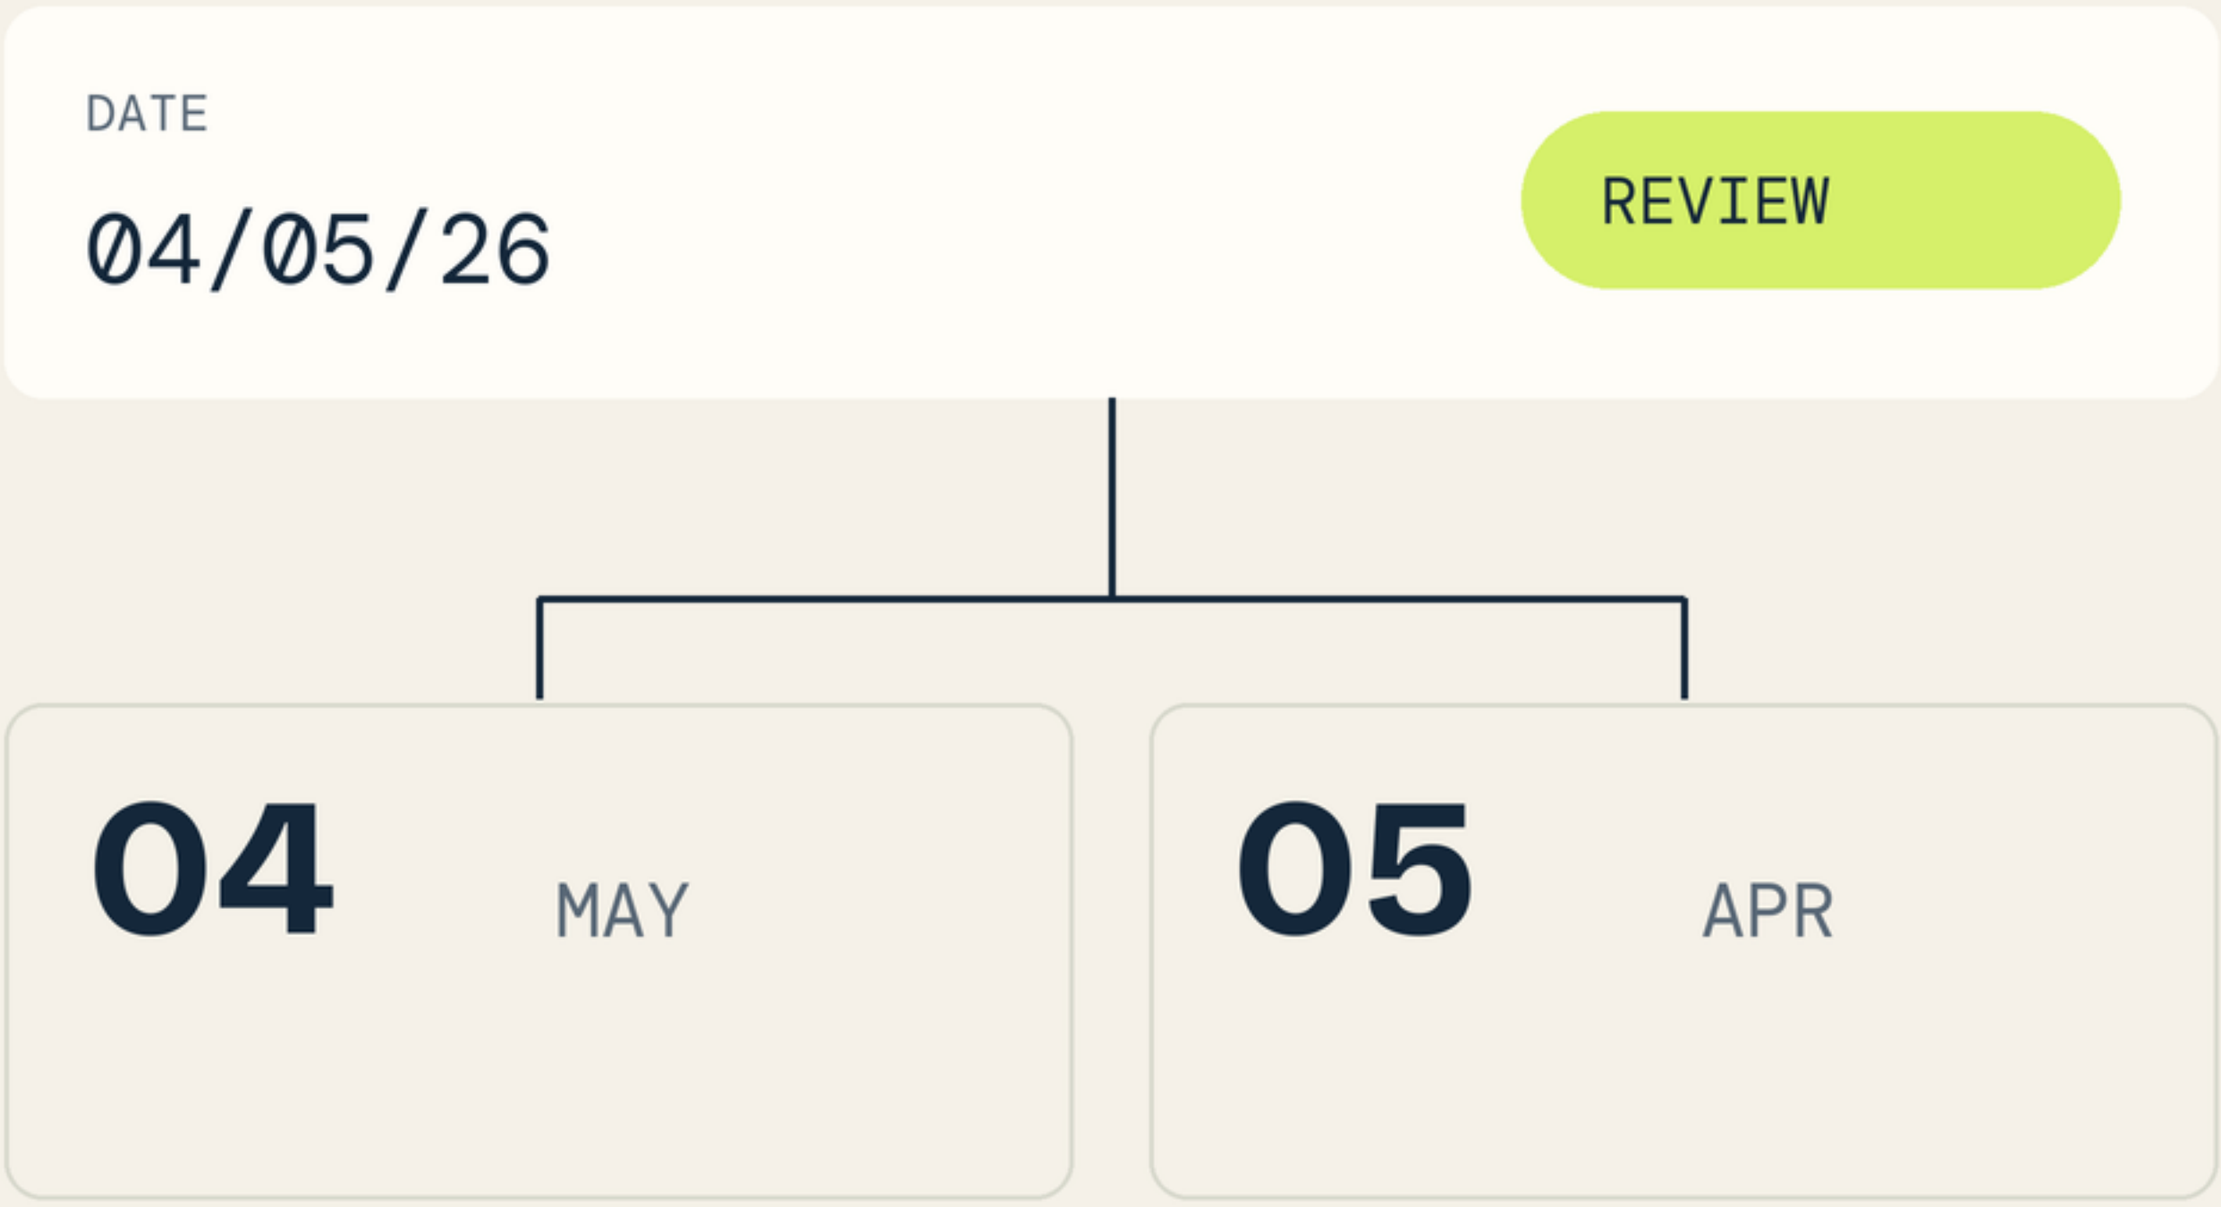

Set the column type before importing.

Flag exceptions. Skip the guess.

Unclear values need a decision, not invention.

Ask for the date format. Keep the source.

Make changes visible.

A clean file should come with a clear trail.

SOURCE		CLEANED
`maya`	→	`maya`
Trimmed outer spaces		
`PAID`	→	`paid`
Standardized case		
`04/05/26`	→	`04/05/26`
Flagged; value preserved		

What changed. Why. Which row.

Fictional, self-created sample

`AI-assisted design + writing / No client results`

One input.
A clear handoff.

Return the data and the decisions behind it.

01 / CLEAN CSV

Consistent, ready-to-use values

02 / EXCEPTIONS

Unclear rows kept for review

03 / SUMMARY

Counts, rules and a change log

Trust the process. Check the output.
